

## SFM

### General description

Turning vanes are installed in rectangular ductwork, e.g. in bends or junctions, in order to optimise the air flow. The turning vanes effectively reduce turbulence and consequently, pressure losses and noise. The use of turning vanes is specified by DIN EN 1505 for bends with an angle greater than 45°. As such, the number of vanes depends on duct dimensions.

Turning vane fasteners, available in galvanised steel and stainless steel, are ideal for fixing the turning vanes. In order to reduce the leakage, all our baffle plugs are already fitted with a mounted sealing washer.

For maximum seal requirements, sealing pads for our turning vane fasteners are available on request.

### Technical specifications

#### 1009

MATERIAL	Galvanized steel <sup>(1)</sup>
FOR GAUGE	0,75 - 0,90 mm
BENEFIT	Quick and easy mounting
PROVIDED WITH	Mounted sealing washer

#### 1012

MATERIAL	Galvanized steel <sup>(1)</sup>
FOR GAUGE	0,75 - 1,20 mm
BENEFIT	Quick and easy mounting
PROVIDED WITH	Mounted sealing washer

### SEALING PAD

MATERIAL	Butyl
COATING	Foil laminated
DIAMETER	50 mm
SUITABLE FOR	Installations in visible areas
PACKAGING	Sheet with 10 pads
BENEFITS	Reduces leakage

<sup>(1)</sup> available on stainless steel upon request
